

Compatibility of pesticides with entomopathogenic nematodes

Compiled by: A. Peters, e-nema GmbH, Klausdorfer Str. 28-36, 24223 Schwentinental, Germany

- Legend:**
- 0: no effect on nematode survival or infectivity
 - 1: weak impact on nematode infectivity and survival (25 to 50% death)
 - 2: moderately toxic (50 to 75% death)
 - 3: toxic (>75% death of nematodes)
 - no entry: No investigations found

All data without guarantee

Remarks

If there is a negative impact, nematodes should be used 3 days before applying the other pesticide or 2 weeks later

| Category | Active ingredient | Trade name | Impact on nematode species | | |
|-----------|---------------------------------|------------------------------------|----------------------------|------------|----------|
| | | | H. bact. | S. feltiae | S. carp. |
