

Tank Mix Table of pesticides and other substances with entomopathogen

Compiled by e-nema GmbH, Klausdorfer Str. 28-36, 24223 Schwentinental, Germany

0 - no effect on nematode survival or infectivity

1 - weak impact on nematode infectivity and survival (25 to 50% death)

2 - moderately toxic (50 to 75% death)

3 - toxic (>75% death of nematodes)

no entry - no investigations found

All data without guarantee

If a negative impact (2 - 3) is expected, nematodes should be used 3 days before applying the pesticide or 2 weeks later.

0 & 1 can be applied tank mixed as well as applied jointly inside the culture without waiting time.

Category	Active ingredient	Trade name	Impact on nematode species		
			Hb	Sf	Sc
