

How to handle nematodes

Use soon after delivery.
Do not freeze, store at 4° - 8 °C in dark.
Avoid exposure to direct sunlight.

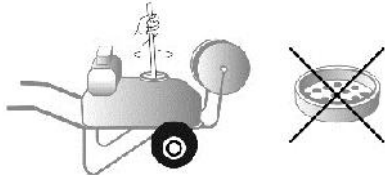

Apply only when soil temperatures is
 8° - 28 °C for *Steinernema feltiae*
 12°-30 °C for *Heterorhabditis bacteriophora* and
Steinernema carpocapsae

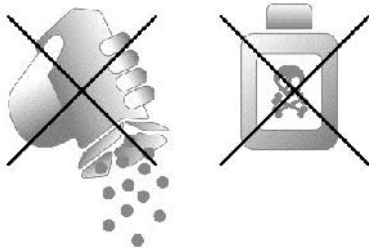

Foliage or soil must be moist at application.
 Irrigate if necessary.
 Preferably spray in the evening or in overcast conditions.
Irrigate immediately after application.

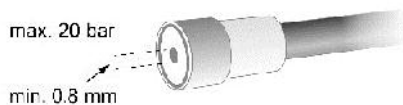

Dissolve product in 10-20 liters of water.
 Use complete pack as distribution of nematodes is not homogenous.
 Agitate for 1-2 minutes and then fill into sprayer or irrigation system.

Remove all filters and sieves from spraying and watering equipment.
Agitate during filling process and application.

Do not tank mix with chemical pesticides.
Check compatibility at www.e-nema.de/service.
 Apply 1 week before or 2 weeks after application of chemical pesticides.
Do not tank mix with fertilizers.
 Fertilization immediately before or after application is no problem.

Use nozzles with at least 0.8 mm diameter
Pressure should not exceed 20 bar
