

Storage

The product may be stored at 4 to 8°C until the expiration date on the package. Do not freeze or expose to temperatures higher than 35°C.

Application conditions

Avoid application in direct sunlight. Apply in the evening, when overcast or during rainfall. The soil surface should be moist and remain moist for two weeks. Irrigate within 30 minutes after application to wash the nematodes into the soil.

Insect pest	Application time
Cabbage root fly	April – July
Leek moth	June – September
Carrot fly	May – September
Onion fly	May – August
Flea beetles	April – August
Cutworms	April – September
Asparagus beetle	June – September
Bean seed fly	May - July

Application

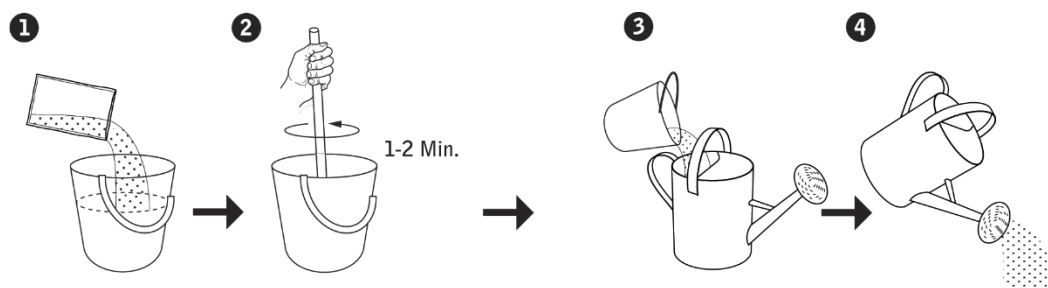

Apply with a watering can or with the Nema-sprayer. Mix nematode powder as indicated and apply immediately. Stir the mixed nematode solution every 15 minutes.

<i>Pack size</i>	<i>treats</i>	<i>dissolve pack in</i>	<i>Nema-Sprayer</i>
10 million	20 m ²	2 l of water	400 ml

In order to achieve a high level of effectiveness, apply both packs 14 days apart.

Premix the entire contents of the package in water as per the instructions in the table while stirring well.

From this, pour 1 litre of nematode suspension into a watering can of 9 litres of water.

10 litres of diluted solution in a watering can treat 10 m². Repeat the procedure until all of the solution has been used.
