

# Application of nema-green<sup>®</sup>

## Pack of 500 million nematodes

### Key points:

1. Remove all filters and sieves. Use nozzles with at least 0.8 mm diameter. Spray 1,000 liter/ha.
2. Spray early morning on dew or during rainfall or in the evening after 6 pm.
3. Moisten soil and turf well.
4. Fill tank with  $\frac{3}{4}$  of required water volume.
5. Dissolve up to 5 packs in a bucket holding 10 liters. Stir well.
6. With the agitator running add content of bucket to the tank.
7. Add wetting agent and fill up with water.
8. Start spraying.
9. Within 30 minutes after application, wash nematodes into the soil using 2-5 liter / m<sup>2</sup>.
10. Keep the soil moist for at least 2 weeks.
